Waldwachstumskunde
Systemanalyse

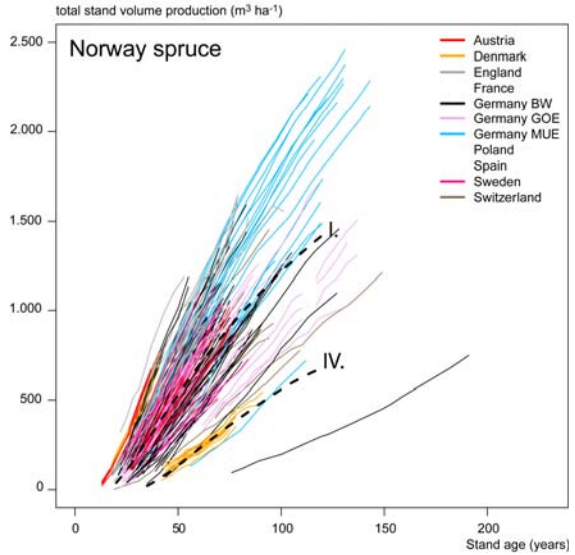
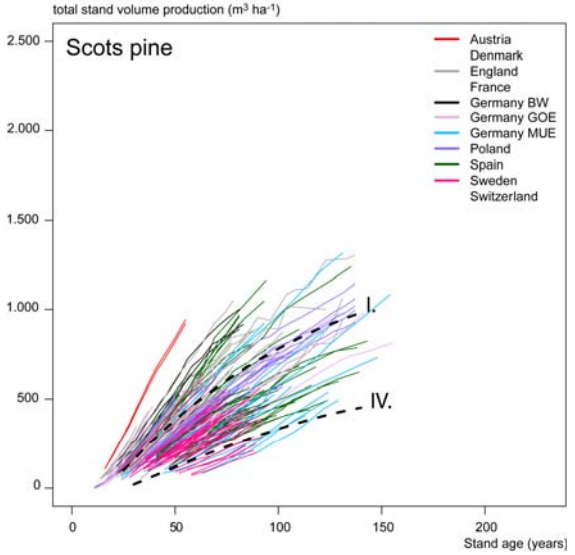
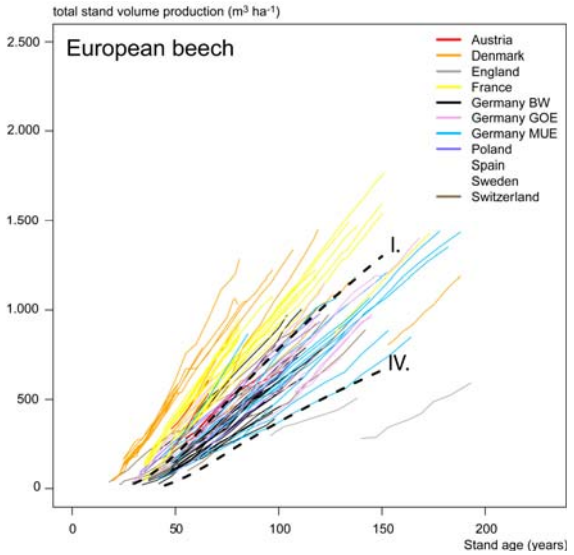
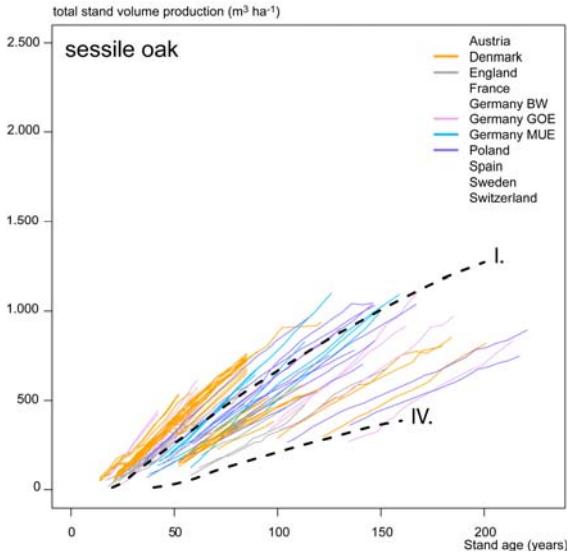
1 Changes of the total stand volume production on 577 long term trials in Europe since 1860





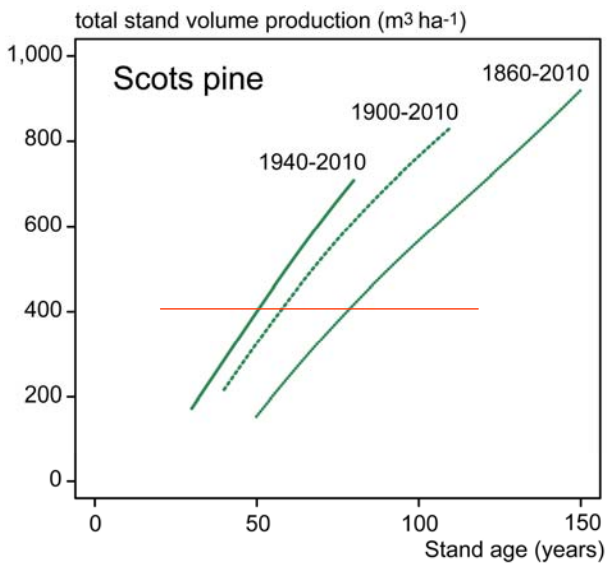


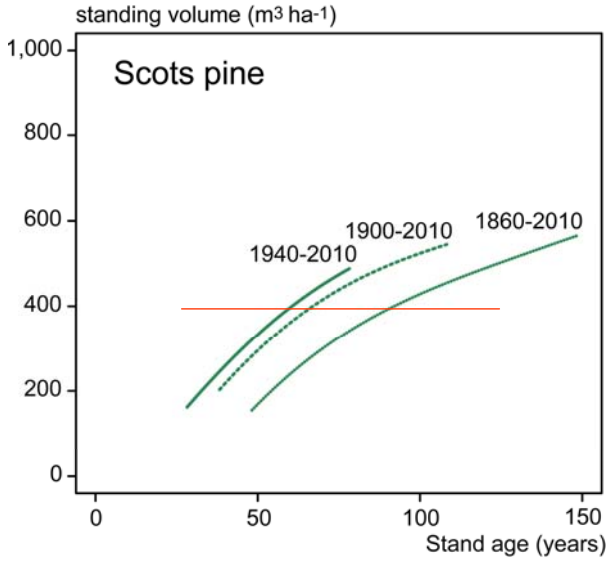


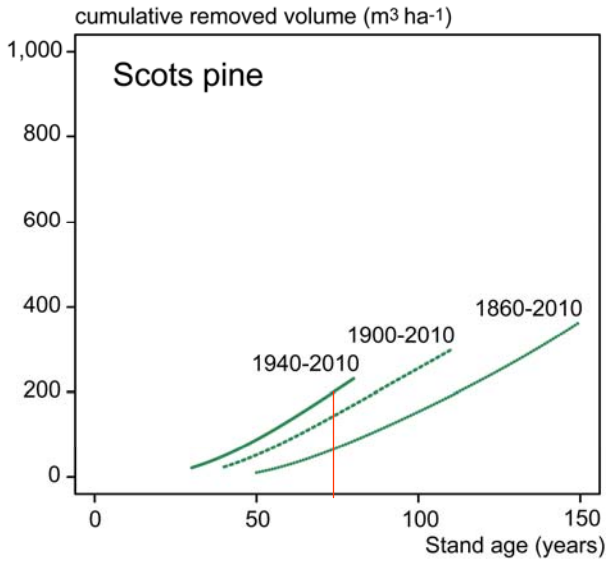
model:
volume growth =
f (age, calender year..)

Waldwachstumskunde
Systemanalyse

1 Growth trends of Scots pine in Europe





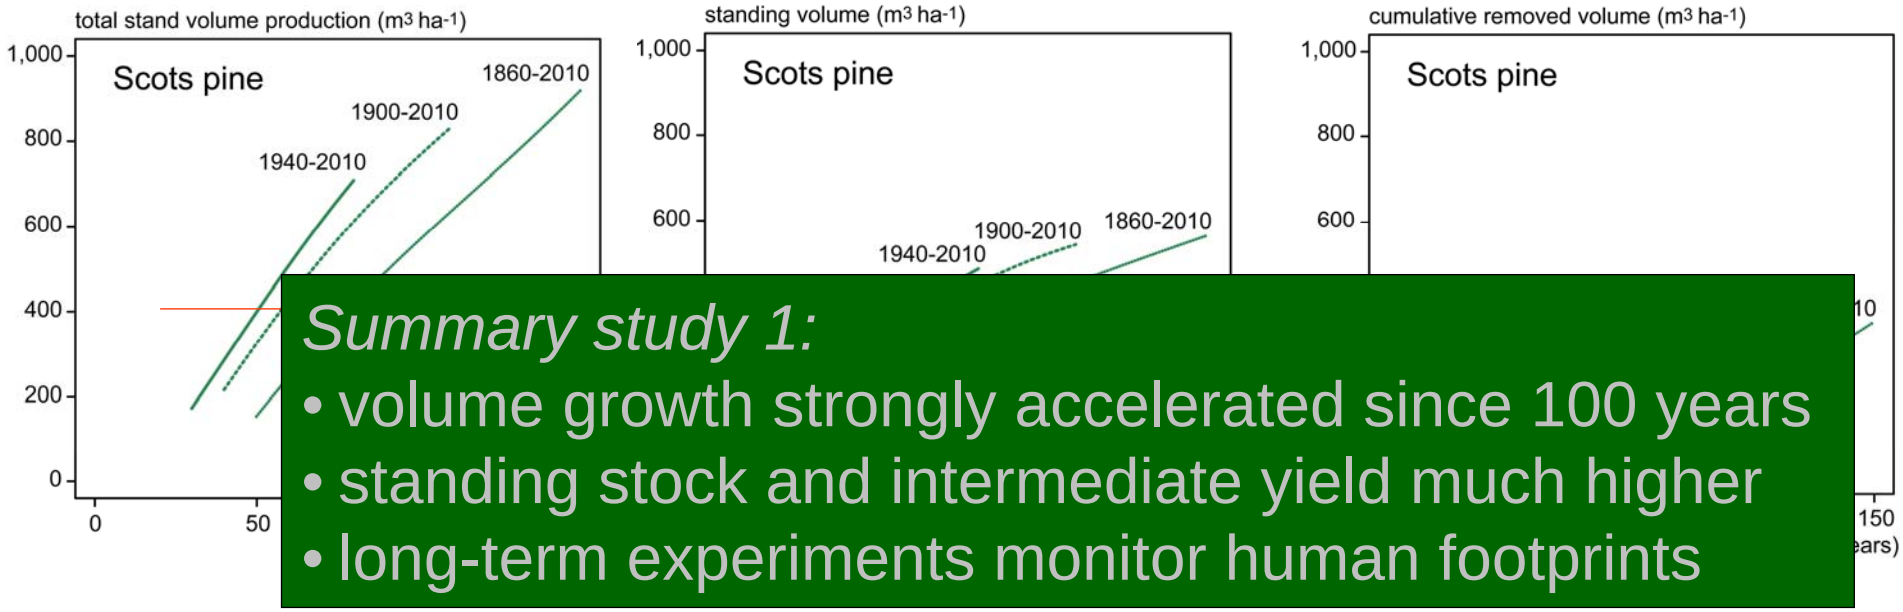


- a given total stand volume production and standing stock is reached 30 years early than 100 years ago
- at the age of 75 intermediate yield is 200 m^3 ha^{-1} while it was just 75 m^3 ha^{-1} 100 years ago,
- this means an increase of intermediate yield by 150 %.

Pretzsch, H. et al. (2018) Maintenance of long-term experiments for unique insights into forest growth dynamics and trends. Review and perspectives, Assmann review series, EFOR

Waldwachstumskunde
Systemanalyse

1 Growth trends of Scots pine in Europe



Summary study 1:

- volume growth strongly accelerated since 100 years
- standing stock and intermediate yield much higher
- long-term experiments monitor human footprints

- a given total stand volume production and standing stock is reached 30 years early than 100 years ago
- at the age of 75 intermediate yield is 200 m^3 ha^{-1} while it was just 75 m^3 ha^{-1} 100 years ago,
- this means an increase of intermediate yield by 150 %.

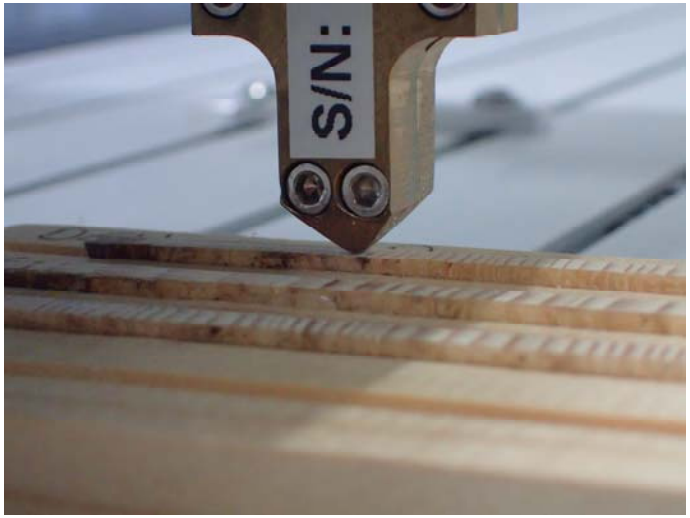
2 Wood density reduced by climate and management

increment core sampling:

sample plots: 41 long-term experiments
species: N. sp (13), S. pi (11), E. beech (8), sess. oak (9)
trees: 392
trees per species: N. sp (127), S. pi (103), E. beech (63), sess. oak (99),
time span: 1870-2016
age: 31-194 years
rings: > 30.000

LIGNOSTATION, high frequency wood densitomery



model: wood density = f (tree size, ring width, calender year..)

Pretzsch, H et al. (2018) Wood density reduced while wood volume growth accelerated in Central European forests since 1870, Forest Ecology and Management, 429: 589-616

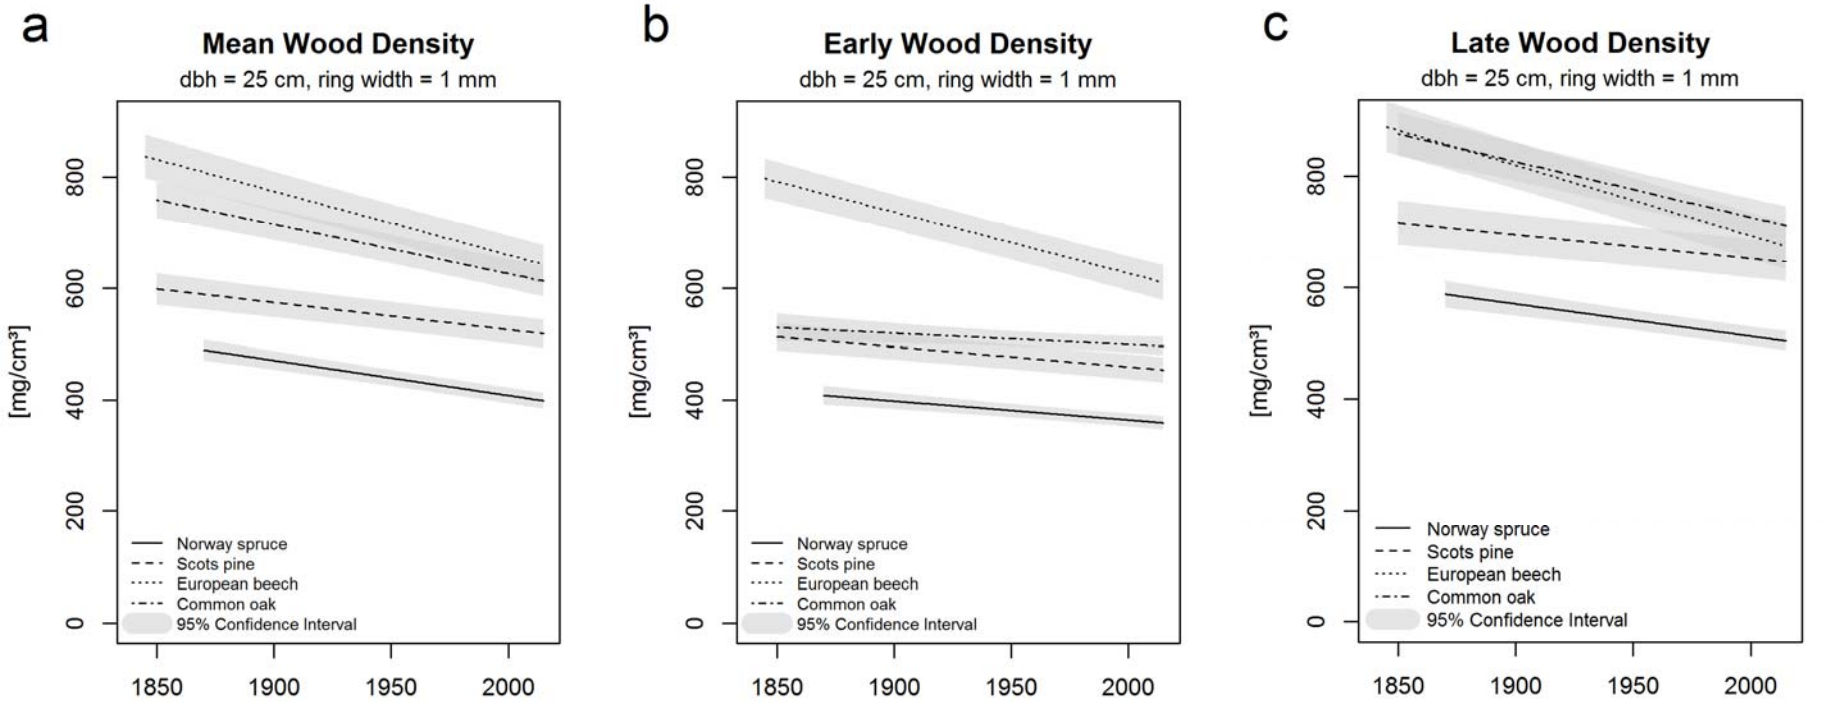
Systemanalyse

2 Wood density reduced by climate and management

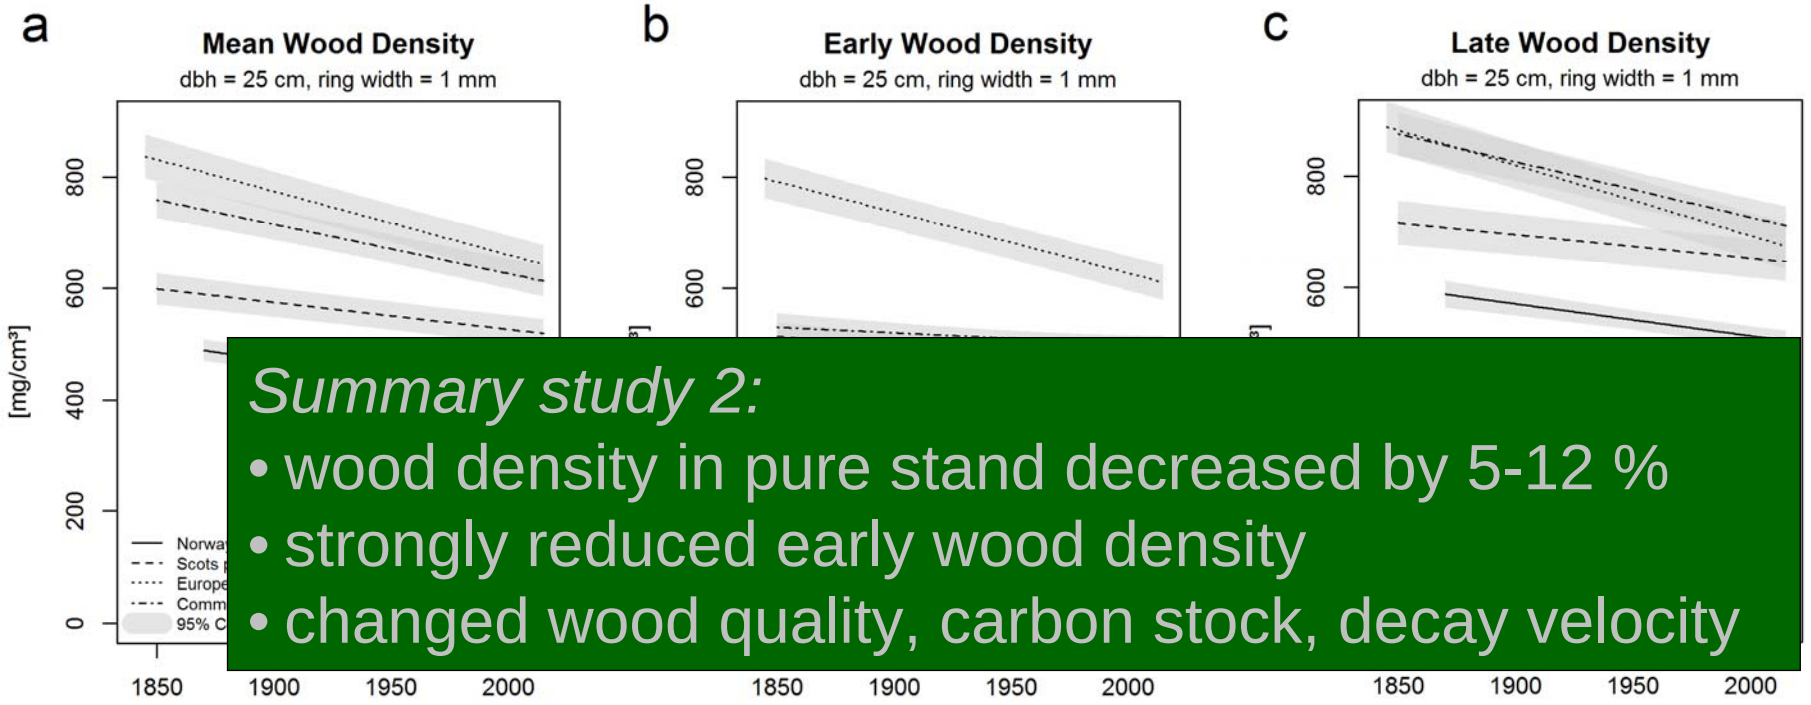


Species	Mean wood density		Early wood density		Late wood density	
Norway spruce	−7.7%	(2.5)	−1.7%	(2.3)	−4.2%	(2.5)
Scots pine	−5.4%	(3.4)	−4.8%	(3.4)	−4.5%	(3.9)
European beech	−11.2%	(3.8)	−10.8%	(3.4)	−12.1%	(4.4)
sessile oak	−11.8%	(3.1)	−1.3%	(2.5)	−10.6%	(3.5)

Pretzsch, H et al. (2018) Wood density reduced while wood volume growth accelerated in Central European forests since 1870, Forest Ecology and Management, 429: 589-616

Waldwachstumskunde
Systemanalyse

2 Wood density reduced by climate and management



Summary study 2:

- wood density in pure stand decreased by 5-12 %
- strongly reduced early wood density
- changed wood quality, carbon stock, decay velocity

Species	Mean wood density		Early wood density		Late wood density	
Norway spruce	−7.7%	(2.5)	−1.7%	(2.3)	−4.2%	(2.5)
Scots pine	−5.4%	(3.4)	−4.8%	(3.4)	−4.5%	(3.9)
European beech	−11.2%	(3.8)	−10.8%	(3.4)	−12.1%	(4.4)
sessile oak	−11.8%	(3.1)	−1.3%	(2.5)	−10.6%	(3.5)
