

# Long-term experiments for unique insights into forest growth dynamics and trends

Hans Pretzsch

http://waldwachstum.wzw.tum.de/index.php?id=presentations

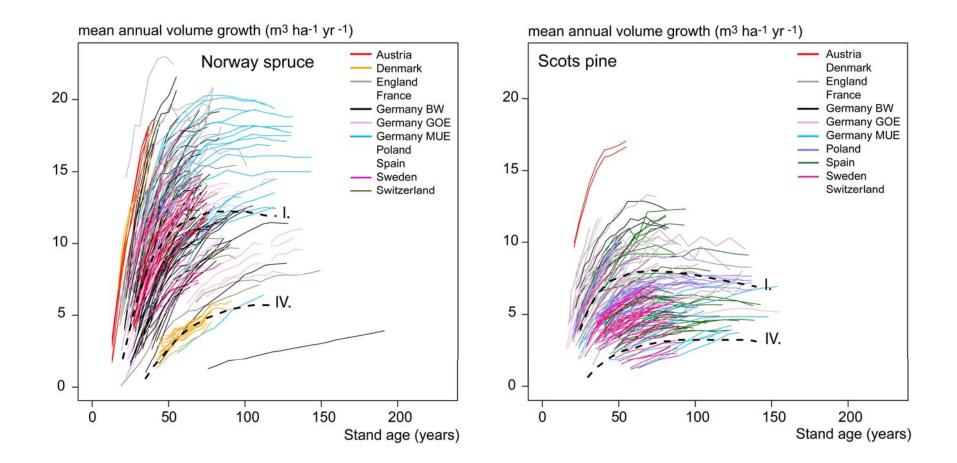

PEFOSS 2018 symposium "People-Forest-Science", Faculty of Forestry, University of Sarajevo, 10.-12.10.2018

## Mean annual volume growth m<sup>3</sup> ha<sup>-1</sup> yr<sup>-1</sup> on long-term experiments across Europe since 1860

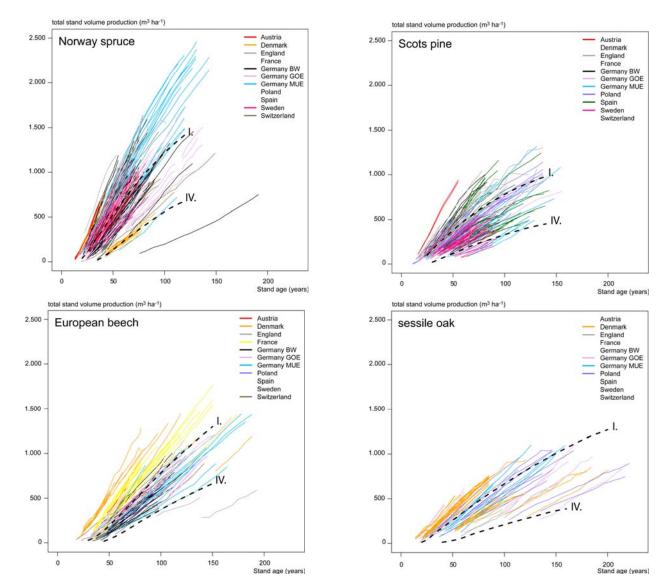

# Long-term experiments for unique insights into forest growth dynamics and trends

Hans Pretzsch

- 1 Stand growth acceleration by environmental change
- 2 Wood density reduced by climate change
- 3 Increase and stabilization of growth of mixedspecies versus mono-specific stands

## 1 Changes of the total stand volume production on 577 long term trials in Europe since 1860

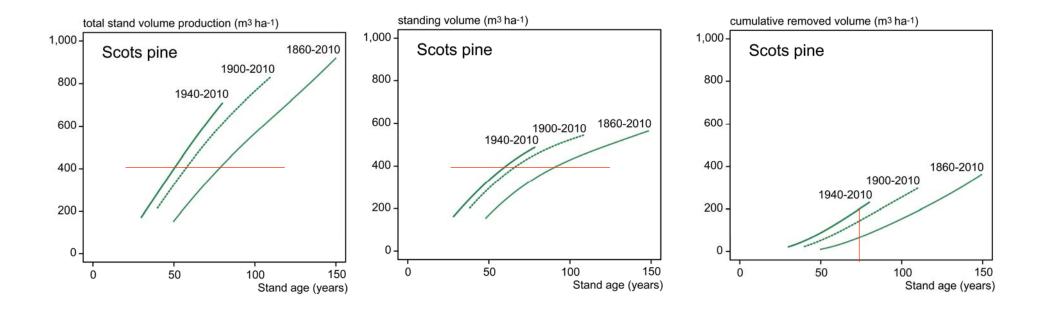

model: volume growth = f (age, calender year..)

#### 1 Growth trends of Scots pine in Europe

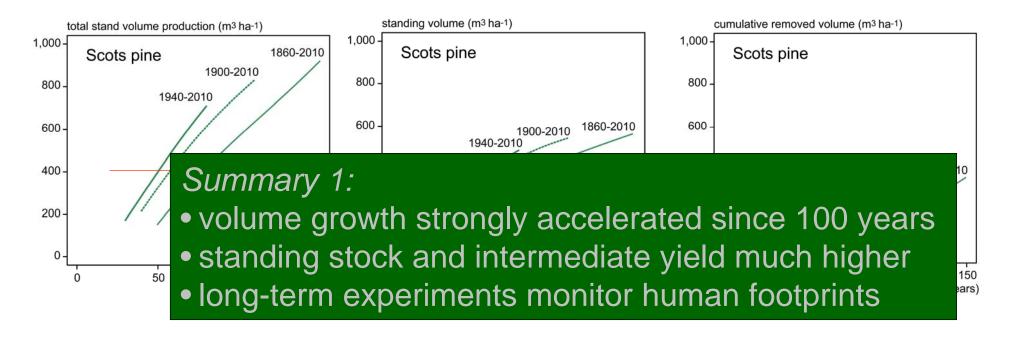

- a given total stand volume production and standing stock is reached 30 years early than 100 years ago
- at the age of 75 intermediate yield is 200 m<sup>3</sup> ha<sup>-1</sup> while it was just 75 m<sup>3</sup> ha<sup>-1</sup> 100 years ago,
- this means an increase of intermediate yield by 150 %.

Pretzsch, H. et al. (2018) Maintenance of long-term experiments for unique insights into forest growth dynamics and trends. Review and perspectives, Assmann review series, EFOR

- this means an increase of intermediate yield by 150 %.

Pretzsch, H. et al. (2018) Maintenance of long-term experiments for unique insights into forest growth dynamics and trends. Review and perspectives, Assmann review series, EFOR

#### 2 Wood density reduced by climate and management

increment core sampling:

```
sample plots: 41 long-term experiments
species: N. sp (13), S. pi (11), E. beech (8),
sess. oak (9)
trees: 392
trees per species: N. sp (127), S. pi (103), E.
beech (63), sess. oak (99),
time span: 1870-2016
age: 31-194 years
rings: > 30.000
```

LIGNOSTATION, high frequency wood densitometry

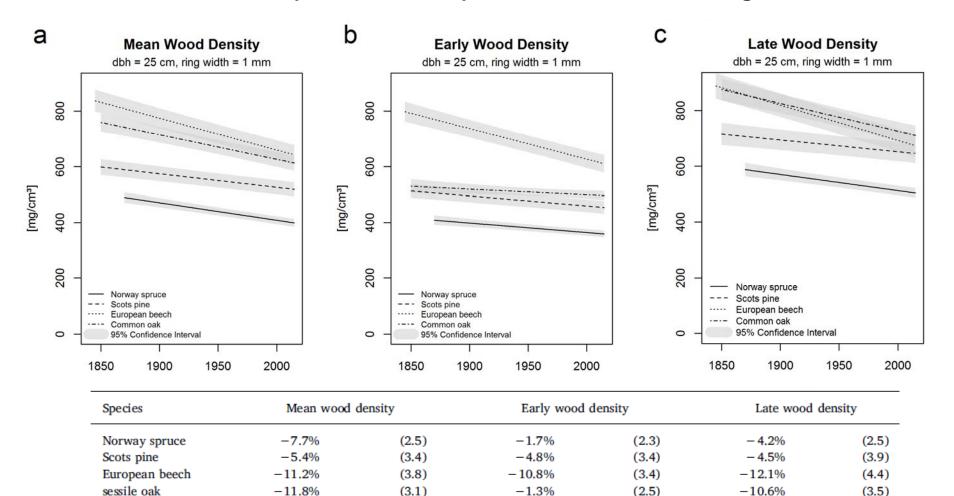

model
wood density = f (tree size, ring width, calender year..)

### Criteria for sustainable forest ecosystem management. Objective hierarchy for the management of municipal forest Traunstein

Criteria for sustainable forest management	Indicators	Weight (%)
Forest resources	timber resources, area of forest, extension of area	20
Health and vitality	stability, fitness, elasticity	17
Productive functions	growth, yield, net return	12
Biological diversity	habitat quality, richness flora/fauna, conservation	10
Protective functions	soil, water, climate, noise, protection	10
Socio-economic functions	employment, recreation, esthetics, proximity to nature	31
